APR01-140

Standard

\$343

Treasury

\$342,500

Fixed Rate

With all the talk about how humans are roasting the planet, we put our top scientists to work on the problem. We developed a thermostat with an external anthropogenic global warming calibration unit which senses climate change and compensates as needed. Best of all, it works both ways so if the U.N. scientists turn out to be wrong, the t-stat will reset to normal parameters. NOTE: If you live in costal areas, don't worry - the CCAC T-stat is water proof so sea levels won't bother it.
